DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Neher (US 6,362,778) in view of Otto (US 5,982,808).

Regarding to claim 1, Neher discloses a personal/child monitor system comprising:

a receiver unit (12, figures 1-2);

a transmitter unit (18) including a battery powered transmitter (64) and a receiver (62) installed within a jewelry item (figure 2) to be worn by a user (20) that is activated remotely by an activation radio signal (26) received by the transmitter unit receiver (62) and locally by depressing a panic button (42, col. 9, line 48 through col. 10, line 63);

the receiver unit programmed with the transmitting frequency of the transmitter unit and a receiver unit transmitter for transmitting the activation radio signal (col. 9, line 48 through col. 10, line 63);

when activated, the transmitter unit transmitting a signal an overhead satellite network (14) which then transmits a coordinate signal to the receiver unit.

Neher discloses everything claimed except for the panic button by being depressed twice in sequence. Otto teaches a communication device (10) including a panic button may initiates a panic signal through operation of the panic button in a particular sequence (col. 6, lines 12-34). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a particular operation sequence for the panic button of Neher, as suggested by Otto, for the purpose of preventing false alarms.

Response to Arguments

3. Applicant's arguments with respect to claim 1 has been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Elliot (US 6,243,039).
